Abstract

Health tips portal provides a good description of healthy habits that a person should follow to maintain their health. This portal provides diet plans, healthy foods that the user should consume, some fruits and their medicinal values that the user should follow to maintain their health . The system also provides a feature in which the user can search for the hospitals depending on the name of the disease that he/she is suffering from. It helps the user to reduce its searching time to a great extent by allowing the user to enter their health problem and search accordingly. The admin can add information about the fruits, diet plans ,healthy habits and so on.It also provides some beauty tips to the user.

The user is provided with a short description which describes how these things will help to improve the user's health .It helps to get information about the food products best suited for the user's health to a great extent. Only the registered users are able to search for hospitals .While searching for hospitals the user can book appointment if needed. Then the user will get a token number provided by the hospital staff.

Hospital staff is responsible for entering the details of the hospital. They can view the patient who are requested for appointment and provide them the token numbers.

API shows the location of the hospitals

Modules

- **Admin:-** Admin is monitoring the entire website. He/she is responsible for adding fruits and its medicinal value, list of healthy habits, beauty tips and so on. The admin maintains a separate account for each user and hospital staff and username and password is provided.
- **User:-** The user can search for fruits that is apt for maintaining his/her health and can view the details of healthy foods, diet plans etc. The user can search for the hospitals near to their location which provide treatment for his/her disease and can book appointment if needed. The user must register to get the details of the nearest hospitals providing treatment for their disease.
- **Hospital staff:-** Hospital staff is the person who add the details of the hospital. They can view the patients requested for appointment and can provide them the token numbers .
